

Agrometal technologies – with 25 years of experience

Food processing machinery for domestic and international markets

„Agrometal technologies” involving 25 years of experience provides the foundation for the operation of small, medium and large size food processing businesses. During this period Agrometal-Food-Tech Ltd became one of the defining participants in the market. By 2014 the headcount has reached 80 employees.

The registered office of the company is situated in Budapest where development, electronic innovation and high-tech industries production has been settled. The production of tanks and food processing containers are carried out in Ráckeresztúr, a premise close to Budapest.

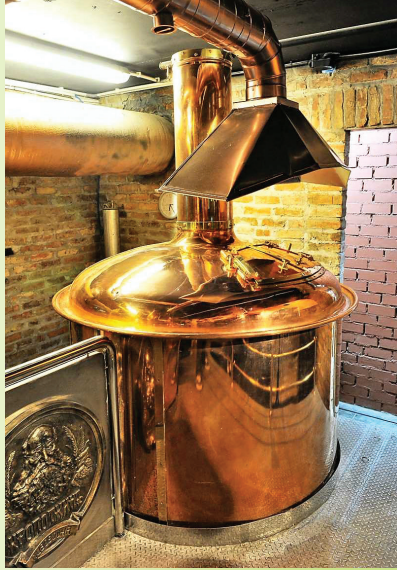

Agrometal-Food-Tech Ltd has built its reputation through manufacturing food processing machinery and the connected innovation activities. Our target is to sell machinery and technologies based on high-tech Hungarian technical traditions and creativity in the Hungarian and international markets. The essence of our philosophy is to create independently developed, cutting-edge technologies as Hungarian intellectual property and to sell these on our own in international markets.

Dairy machinery even to Austria

It is not an easy task to compete with well-known, European Union-based producers day by day. Thanks to our 25 years of experience we often manage to complete dairy investment projects ahead of big international companies, as we boast of competitive technologies for the whole scale of milk processing and also for cattle, goat and sheep stations as well as small, medium and large size breweries.

The interest is reflected in our references not only in Hungary (Sole, Gic, Izsák, Bokor, Bicske etc.) but also in further parts of the world. We can mention Monor, Odorheiu-Secuiesc, Sfantu-Gheorghe, Arad, Lekence, Careiin Romania and in the ex-Soviet region just to mention big industrial plants Dubna, Novosibirsk

- Russia, Amiran - Kazakhstan, Dusanbe - Tajikistan and our latest, ongoing project is in Algeria. Our task there is to design, construct and complete a cattle station for 2000 animals as well as to complete an up-to-date milking plant and to build a dairy factory plant to produce quality dairy products.

The biggest challenge for us is producers from Western-Europe and it is satisfying that we have reached several successful results competing with them. One of our biggest successes is the orders from KHS AG of a value of hundreds of million Forints. This company is a multinational company manufacturing tanks and complete investment projects. And we can also mention the milk-empire Austria's Landfrisch Molkerei in Wels, where we installed a cottage-cheese production line which has been produced exclusively with Agrometal recipes and own-developed technologies and equipment.

Gold-medalist beers from Agrometal breweries

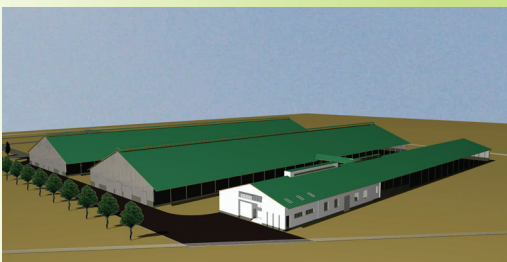

Complete, automatized brewery systems, with either a complex or a module-based full production line added with own-developed malt-grinder equipment - any kind of beer can be produced on these in excellent quality.

It has been proved by the numerous gold medals won by our customers taking part in brewing competitions using the Agrometal technologies. The brewing technology has been developed especially for our partners, it is patented under „KELLERS BIER” and it has been used to produce excellent quality ale and dark beers and other beer specialities from Russia to Tajikistan, from Moscow to Vladivostok.

Satisfied partners, returning customers

The foundation of our business successes is the sales to Eastern Europe and ex-Soviet countries, where we have transported complete Agrometal food-processing production lines, machinery and equipment more than 70 times in the past decade.

We are proud to have more and more returning customers and when they would like to expand the capacity of Agrometal machinery or buy more modern machines and technologies we are the first they turn to. It proves that their previous good business deals create trust - and all of Agrometal colleagues are interested in this.

Agrometal Food-Tech Ltd has introduced and operated a quality assurance system complies with MSZ EN ISO 9001:2009 standards.
